

DIGITAL ENGINEERING:

TECH STACKS:

CLIENT:

A professional software and services platform for growing brands and manufacturers, using technology to streamline fulfilment.

CHALLENGE:

The challenge was to build an efficient and intelligent order fulfilment system and one-view of all inventory across multiple partners or locations. To also reduce shipping time, cut down costs and lead to better reviews.

SOLUTION:

We designed the entire architecture of the portal with a high-level view for inventory management, including order tracking and inventory aging. Intelligent fulfilment built for flexibility and scale. Identify pain points to maximize profits and better understand promotional cycles to grow the business and make data driven decisions.
