

DIGITAL ENGINEERING: DEVELOPED AN IOS APPLICATION FOR USERS TO SHARE THEIR TRAVEL EXPERIENCE

CLIENT:

A travel company where the mission is to tackle trip chaos by combining consumer data with human empathy to revolutionize the customer travel experience.

CHALLENGE:

The client requires an iOS application for a seamless customer experience where users can register via google account and manually add/modify their trips, collect data from google calendar, and

SOLUTION:

We designed and developed the Sentinel™ Threat Management System and built a response monitoring system that can detect concealed weapons and explosives proactively and in real-time. Our solution provides identifying an armed person by using information in public spaces by security personnel.

We used D3 Maps to showcase the map for premises, display the location of devices and highlight the area in case of a threat.
